

This book is NOT a formal medical report, journal or magazine article, or any other official form of documentation of medicine or medical treatment. This book IS a memoir that records the experience of one woman and of many women everywhere who have faced, and may still be facing, serious health problems and concerns relating to uterine fibroids, abnormal uterine bleeding (AUB) and the female reproductive system.

*An Issue of Blood* reveals the negative effects these serious health issues have on the families, jobs, social lives and standards of living of these women. It describes the experience and the effects of various medical procedures, such as uterine ablation and hysterectomy, while asking whether these and other serious female reproductive conditions are listed as physical disabilities.

Last, but most important, this book is a testament to the healing virtue, the wise counsel and the specific instructions from the GOD that is Savior and Healer. Moving through HIS people, the Lord brought about complete healing for two women in different times and places. One woman had her experience biblically recorded, and the other has documented her own.
