

How many people cheat when they can? Between 63 and 71% it seems. Is this about the right time to find out why?

"For the toxic narcissist, life is essentially war. Win or lose a battle, move on to the next. Rules and consequence don't matter. This is the first exciting meaningful explanation I have seen."

Ripping apart the fabric of society as we know it, then putting it back together again - better. The impact of the toxic narcissist on our world has been well documented. What is less well known, especially in the field of psychology, is where narcissism originates. In "A Few Good Cardinals" we explore how the narcissist may stifle meaningful progress, contributes to trauma, and where the behavior appears to manifest. Carl Vincent shares his answer to one of the most pertinent questions of all time: how to interpret and predict human behavior.

Complex trauma, war, devastation, they are the result of conscious choices by people who live in fear. How do we know who is who? It seems we need a key. Our ancestors and experts in the field alive today appear to have been searching for it for millennia. Hidden literally in plain sight, a science developed over thousands of years appears to have the key we need.
